

# Traffic Flow Analysis and Conceptual Planning

One of the biggest problems we see on school sites is a problem with traffic flow, pedestrian movement, intermingling of car and bus traffic, parking shortages, etc. This often stems from burgeoning student populations that create significantly more traffic than was ever anticipated, or it was simply a design flaw. Often it can be a result of a change in use and student population brought on by consolidation in the District.

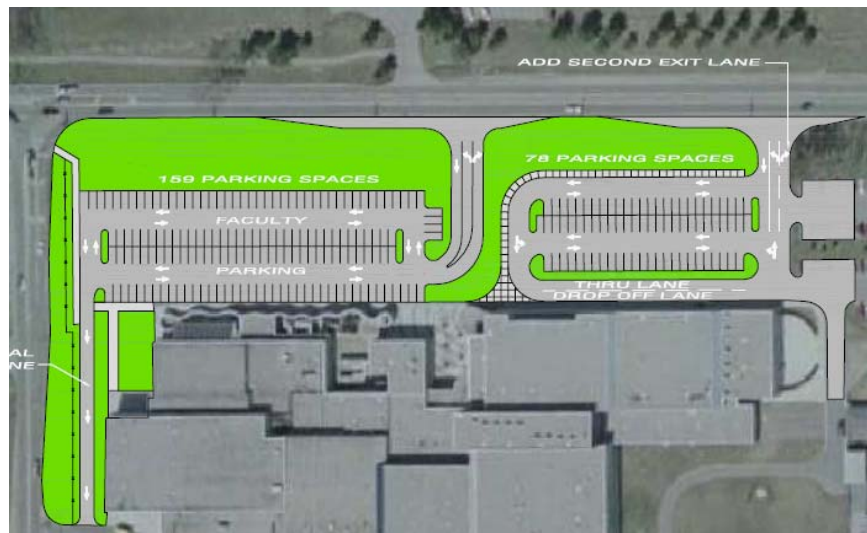

Spalding DeDecker Associates, Inc. (SDA) has worked with many school districts to generate conceptual plan options that will help to eliminate, or at least reduce, the problems on the site. These concept plans can be prepared for improved drop-off loops or expanded parking areas, and are accompanied by cost estimates to assist in the budgeting for future work.

SDA would be willing to provide you with a free analysis and conceptual plan for traffic flow analysis and conceptual plan for traffic flow improvements at one of your school sites. All we would need is an aerial photograph (often available online), or old plans in hard copy or electronic format, along with some basic information on number of students, buses, and/or car traffic on the site.
